

CHILD SEAT BELTLOCK

safety for your child

BASF
We create chemistry

GOAL

I have chosen the „one product – one material“ brief. I focus on the kids' safety in a car. Children are sometimes restless on long car drives. They want to be able to move around in the car, so they sometimes unbuckle their seat belt, which can have terrible results in a car crash. I would like to prevent this with my product.

SAFETY

ONE MATERIAL / SERIAL PRODUCTION

ERGONOMICS

USING FOR EMERGENCY SITUATION

SIMPLE DESIGN

PRACTICAL STORAGE SPACE

RESEARCH OF THE TARGET GROUP

FOR THIS SEATS

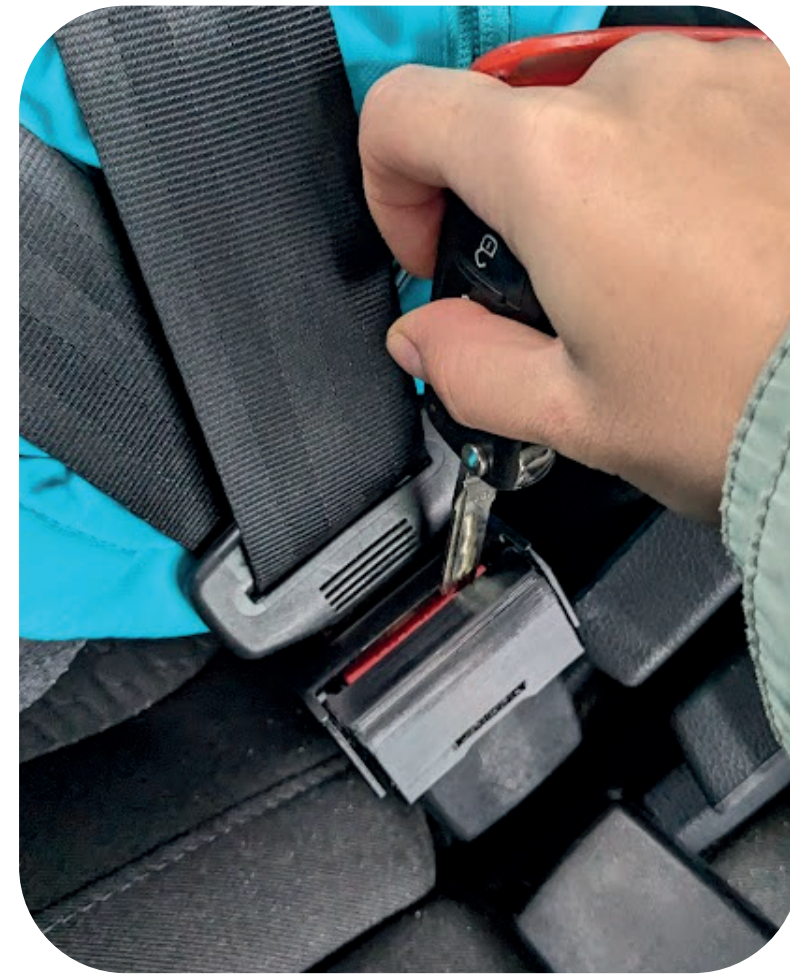

Age? My target group are kids approximately 5-8 years old.

DESCRIPTION

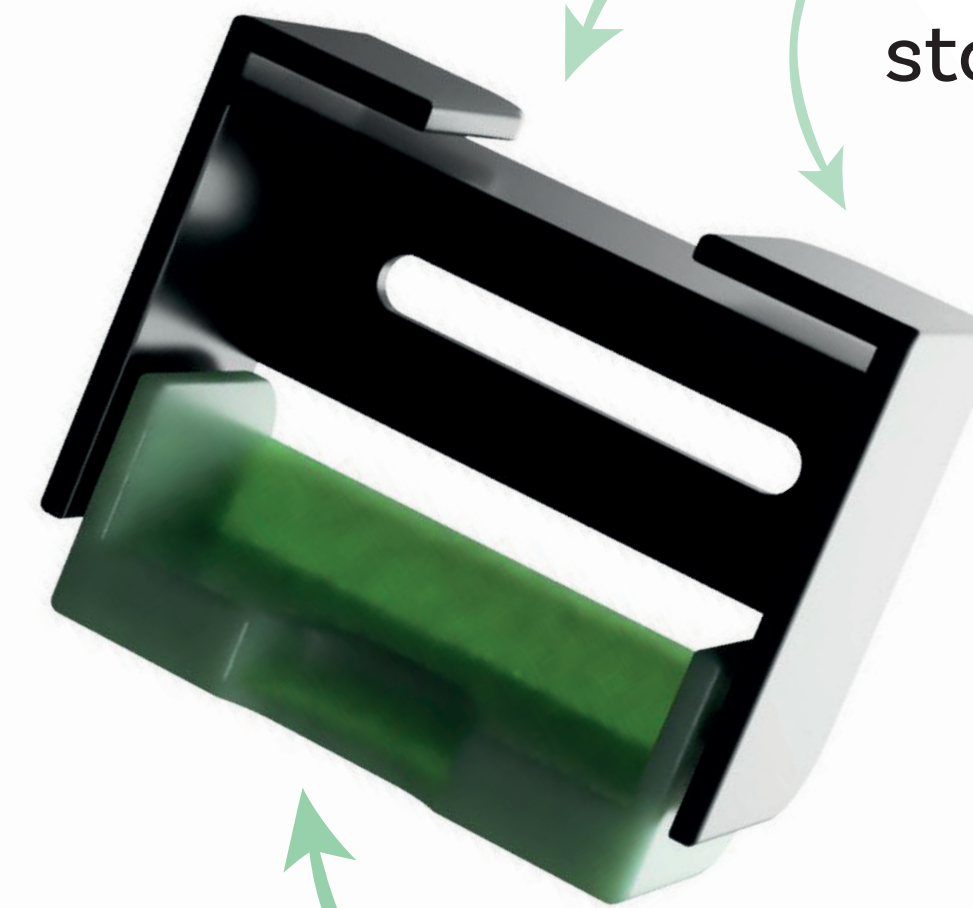

Material is **Ultramid®**

open by a car key or card

storage belt hooks

emergency handle

INSTRUCTIONS FOR USE

EMERGENCY HANDLE

It should be used in a stressful and life-threatening situation. When you can't search for keys and card. The handle can only be used once, it is not intended for regular use. The lock consists of two breakable pins.
