

LOOPER

Looper project introduces an innovative design for a floor chair that provides comfortable back support while sitting on the ground. It was inspired by the "less is more",

balances minimalism with human connection, prioritizing functionality, simplicity, emotional engagement, and customization.

Practical Features

A key element of the design is the inclusion of two oval cushions, ergonomically positioned at shoulder blade height to ensure optimal back support.

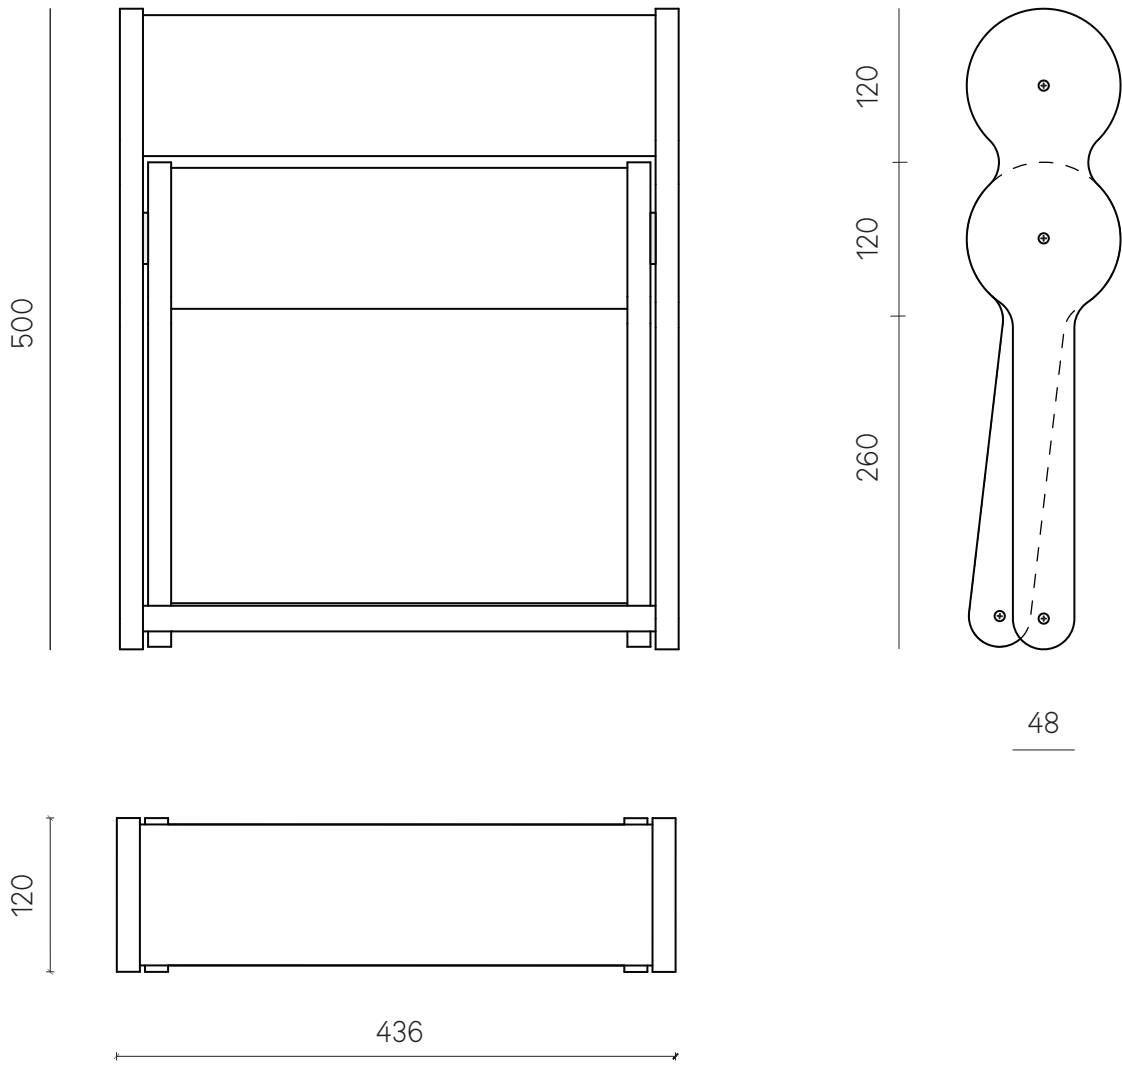

Practical solution for small apartments or camping, as the support is foldable for easy portability and storage.

Looper contains an adjustable strap, allowing users to set the desired seating angle, and a textile base at the bottom that is stabilized by the user's weight, preventing sliding.
